ABSTRACT

The invention provides improved orthopedic cast bandages and improved orthopedic casts which include one or more colors. The orthopedic cast bandages of the invention comprise an open mesh fabric tape and a hardenable liquid resin coated onto the fibrous tape. At least one coloring agent is visibly disposed on at least a portion of the fibrous tape. The coloring agent is stably retained by the fibrous tape in the presence of the hardenable liquid resin. Because the coloring agent is stably retained by the fibrous tape, the invention provides for colored orthopedic casting tapes which do not require the use of colored liquid resins. In addition, multiple colored, patterned orthopedic casts, not heretofore available, are provided by the invention.
